

The Naming of Species

(and why do names change?)

Wednesday, December 11, 7 PM
1912 Center, Great Room
412 East Third St., Moscow

Ben Legler, Collections Manager at the University of Idaho Stillinger Herbarium and co-editor of the 2nd Edition of the *Flora of the Pacific Northwest*, will present on how plants are named and the reasons why names and classifications change. Are you frustrated by the many recent changes to species names? Do you wonder what happened to familiar families like Scrophulariaceae? Come find out!

Thimbleberry has been called *Rubus parviflorus* since the year 1818. It is now *Rubus nutkanus*. Why?

Sponsored by the Idaho Native Plant Society, White Pine Chapter, and the University of Idaho Stillinger Herbarium.
